Application/Control Number: 10/721,384 Page 2

Art Unit: 2826

Serial Number: 10/721384 Attorney's Docket #: Q73159

Filing Date: 11/26/2003;

Applicant: Tan et al.

**Examiner: Alexander Williams** 

Applicant's Amendment/Election with traverse of Species I of figure 2 (device claims 1, 6, 7, and 13) filed 1/28/05 is acknowledged.

Applicant's arguments have been considered. Applicant's election of Species 1 (figures 2 and 8, claims 1, 6, 7 and 13) will be examined.

This application contains claims 2-5, 8-12 and 14-25 drawn to an invention non-elected with traverse. A complete response to the final rejection must include cancellation of non-elected claims or other appropriate action (see 37 CFR  $\rightarrow$  1.144 & MPEP  $\rightarrow$  821.01).

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1, 6, 7 and 13 are rejected under 35 U.S.C. § 102(b) as being anticipated by Huang et al. (U.S. Patent # 6,414,385 B1).

1. Huang et al. (figures 1 to 8) specifically figure 5 show an integrated circuit package 220 comprising: a) a plurality of leads 202 each having a first face and a second face opposite to said first face; b) a die pad 200 having a first face and a second face opposite to said first face, wherein said second face of said die pad is orthogonally offset from said second face of said leads, such that said second face of said die pad and said second face of said leads are not coplanar; c) an integrated circuit chip 208 substantially laterally disposed between said plurality of leads and having a first face and a second face opposite to said first face, whereby said first face of said integrated circuit chip is proximate to said second face of said die pad and is coupled to said second face of said die pad; and d) a plurality of wires 216 linking said plurality of leads to said integrated circuit chip, each of said plurality of wires comprising: a first end electrically conductively joined to said first face of said IC chip, wherein said first end is

Application/Control Number: 10/721,384

Art Unit: 2826

disposed between a plane defined by said second face of said die pad and a plane defined by said first face of said integrated circuit chip, and a second end electrically conductively joined to said first face of one of said plurality of leads, wherein said second end is disposed between a plane defined by said first face of said die pad and a plane defined by said first face of one of said plurality of leads.

- 6. The integrated circuit package according to claim 1, Huang et al. show wherein said plurality of leads and said die pad are composed of a common copper alloy.
- 7. The integrated circuit package according to claim 1, Huang et al. show wherein said plurality of wires are composed of one of a group comprising: gold, gold with some level of impurities, aluminum, and copper.
- 13. The integrated circuit package according to claim 1, Huang et al. show wherein: said plurality of leads and said die pad are formed from a leadframe, said leadframe comprising: an outer frame supporting said plurality of leads extending substantially inward from said outer frame, and a plurality of tie bars securing said outer frame to said die pad, substantially centrally disposed within said outer frame; and wherein each of said plurality of tie bars includes a mechanical depression, such that an offset is created between said die pad and said plurality of leads.
